

Papercheck

Version 0.3.1 (2022/08/05)

Papercheck is a Lua-based script that searches a L^AT_EX file (tex) for typical errors.¹ It does not make any changes to the tex file; it just logs what it finds.

Papercheck is available at <https://github.com/ems-press/papercheck>.

For bug reports, comments and suggestions contact [Simon Winter](#).

1 Install Papercheck

1. Install Lua (version 5.1 or higher); see the Bibcheck manual.
2. Copy both Lua files into a Papercheck folder, e.g.
`C:\tools\papercheck\{papercheck.lua, papercheckfunctions.lua}`
The whole path must not contain any spaces!

2 How to use Papercheck

1. The main tex/aux file, the `\include` and `\input` tex/aux files², and the log file must all be in the same folder.
2. Open the command terminal, go to the directory of the tex file, and write
`lua PATH\papercheck.lua MAINFILE.tex`
e.g.
`lua C:\tools\papercheck\papercheck.lua main.tex`
The whole path must not contain any spaces!
3. The result of the analysis is displayed directly in the terminal.
4. Note that Papercheck just collects passages that *might* be wrong. If, for example, it is pointed out that both spellings “pull back” and “pullback” occur, this may well be correct (“If we pull back the bundle, we get a pullback bundle.”); however, it is worth examining the tex file for both spellings.
5. It is advisable to run Papercheck again after making changes to the tex file.

3 Use a bat file on Windows

Instead of using the command terminal, you can use a bat file:

1. Create, using any text editor, a file `papercheck.bat` containing the following four lines:

```
@echo off
chcp 65001
lua "C :...\ papercheck.lua" %~f1
pause
```

Here `C :...\ papercheck.lua` is the full path of `papercheck.lua`. Keep the quotation marks!

2. Create a desktop shortcut of that batch file.
3. Now drag and drop your tex file onto the desktop shortcut. Easy!

¹Comments (%), `\label`, `\ref`, `\eqref`, and `\cite` are excluded; the bibliography for most of the searches too.

²Papercheck can handle nested `\include`/`\input` structure, e.g. “`\input files`” that contain “`\input files`”.

4 Noteworthy

1. If you have `\usepackage{refcheck}` in your tex file, Papercheck will print all refcheck warnings.
